

MRM Peer Review Committee - Terms of reference

Mandate

One of the main goals of the MRM Network is to encourage and support research into a basic understanding of the biology of stem cells, which could then be translated into new technologies and approaches in regenerative medicine. It is crucial that MRM supports its researchers as well as the numerous [core platforms](#) built across the McGill University network. We established the [MRM Internal Funding competition](#) to provide seed funding for research projects using MRM-accredited core facilities.

The Peer Review Committee is responsible for scientific assessment of projects submitted to these competitions. This committee may also be convened to review applications for other relevant funding opportunities as they appear.

Specific areas of responsibility

- Review applications submitted to the MRM Internal Funding Competition
- Review applications for other relevant funding opportunities as they appear

Composition

The MRM Peer Review Committee is composed of faculty members, drawn from membership of the Network. Each member is nominated for a 2-year term, renewable.

Recurrence of meetings

The MRM Peer Review Committee is called upon to meet as required.
